

### **The Anatomy of Murder**

A thrilling and an exciting event which not only gives you a chance to stimulate your investigative mind, but also brings out the criminological master in you. You will be provided with an artificially created murder scene, much like a genuine conspiracy, so that you can utilize your astute thinking facilities.

The fundamental point of organizing this event is that anyone from any branch can take an interest in it. In this event, participants need to explain a murder puzzle by applying their cognitive abilities and utilizing some fundamental information from the forensics stream. The event will take place in 2 rounds:

#### Round 1:

This round will consist of the basic questions involved in a crime investigation; you can easily crack these questions if you are good enough in brainstorming.

#### Round 2:

This round will test your abilities of speculation as an analyst and a forensic expert (which implies you'll need to work with different kinds of scientific equipment given while investigating the crime scene). Only the groups qualifying in round 1 will be permitted to showcase their investigative aptitude and explain the murder.

**Note: - Information pertaining to biology will be provided during the event, so no need to panic (the event will be equally challenging for both biology and non-biology students). Simply act like a criminologist, incorporate and examine every one of the pieces of information which are given. Break the murder puzzle and win exciting cash prizes.**
